

EDA Questions

1. What are the purchasing patterns of new customers versus repeat customers?

New customers generally make fewer rentals and spend less during their initial transactions. Repeat customers rent films more frequently, spend more over time, and show stronger preferences for specific film categories. Their continued engagement contributes significantly to overall revenue, highlighting the importance of customer retention strategies.

2. Which films have the highest rental rates and are most in demand?

Films with the highest rental rates are typically popular titles that experience frequent rentals despite their premium pricing. These films generate higher revenue because customers are willing to pay more for highly demanded content. Action, Comedy, and Family films often rank among the most rented titles.

3. Are there correlations between staff performance and customer satisfaction?

Yes. Stores managed by efficient and responsive staff generally receive better customer feedback and experience higher customer retention. Faster service, accurate recommendations, and professional interactions contribute positively to customer satisfaction and repeat business.

4. Are there seasonal trends in customer behavior across different locations?

Yes. Customer activity tends to increase during weekends, holidays, and festive periods. Some locations experience higher rental volumes during vacation seasons, while others maintain relatively stable demand throughout the year. Seasonal peaks often result in increased revenue and higher inventory utilization.

5. Are certain language films more popular among specific customer segments?

Yes. Customer preferences for film languages often vary based on cultural background and regional demographics. Certain customer groups show a stronger preference for films available in their preferred language, resulting in higher rental frequencies for those language categories.

6. How does customer loyalty impact sales revenue over time?

Customer loyalty has a significant positive impact on revenue. Loyal customers rent more frequently, spend more consistently, and are more likely to explore different film categories. Over time, repeat customers contribute a substantial portion of total sales revenue, making customer retention an important business objective.

7. Are certain film categories more popular in specific locations?

Yes. Customer preferences vary across locations. Some stores experience higher demand for Action and Thriller films, while others show stronger interest in Family, Comedy, or Drama categories. These differences suggest that inventory management should be tailored to local customer preferences.

8. How does the availability and knowledge of staff affect customer ratings?

Stores with knowledgeable and readily available staff generally receive higher customer ratings. Staff members who can assist customers efficiently, provide recommendations, and resolve issues quickly contribute to a better customer experience and increased satisfaction levels.

9. How does the proximity of stores to customers impact rental frequency?

Customers who live closer to store locations tend to rent films more frequently due to convenience and reduced travel time. Greater accessibility encourages repeat visits and increases customer engagement, while customers located farther away typically rent less often.

10. Do specific film categories attract different age groups of customers?

Yes. Younger customers generally show greater interest in Action, Adventure, and Science Fiction films, while older customers often prefer Drama, Documentary, and Classic films. Family films attract customers across multiple age groups, particularly households with children.

11. What are the demographics and preferences of the highest-spending customers?

The highest-spending customers are typically repeat renters who actively engage with multiple film categories. They often rent films more frequently than average customers and demonstrate strong loyalty to the store. Their preferences commonly include premium and highly rated film categories.

12. How does the availability of inventory impact customer satisfaction and repeat business?

Inventory availability directly influences customer satisfaction. Customers are more likely to return when their preferred films are consistently available. Stock shortages can lead to dissatisfaction and reduced rental frequency, while effective inventory management encourages repeat business and customer loyalty.

13. What are the busiest hours or days for each store location, and how does it impact staffing requirements?

Weekends and evening hours are typically the busiest periods across most store locations. During these peak times, customer traffic increases significantly, requiring additional staff to maintain service quality, reduce waiting times, and ensure smooth operations. Proper staffing during busy periods improves customer satisfaction and operational efficiency.

14. What are the cultural or demographic factors that influence customer preferences in different locations?

Customer preferences are influenced by factors such as age distribution, family composition, language preferences, and local cultural interests. Locations with diverse customer populations often show demand for a wider variety of film categories and languages, while other locations may demonstrate more specialized viewing preferences.

15. How does the availability of films in different languages impact customer satisfaction and rental frequency?

Providing films in multiple languages improves customer satisfaction by catering to diverse audiences. Customers are more likely to rent frequently when films are available in their preferred language. A broader language selection expands the customer base, increases rental activity, and enhances overall customer experience.
